

**Product Name:            *ECO POTENT***

**Characteristics:**

*ECO POTENT* is a product specifically developed to treat and condition water of different qualities for agricultural applications.

Alkaline waters produce "**Alkaline Hydrolysis**" on a large amount of pesticides; that is, breaking of the active molecule and loss of effectiveness, often in just a few minutes, with the consequent loss of benefits.

*ECO POTENT* reduces water pH, making it compatible with agricultural applications.

*ECO POTENT* has greater ion-capturing capacity: Mg, Ca, Al, Fe, etc., present in hard water.

*ECO POTENT* contains emulsifying agents for mixing the preparation.

*ECO POTENT* acts as a buffer as it keeps the pH at a desirable level for agricultural applications.

*ECO POTENT*: Water conditioner, pH regulator, cation sequestrant, humectant.

**Components:**

Lauryl alcohol ethoxylate ..... 48.00 g  
Complex and hydrolyzing agents... sufficient amount for 100 g

**Instructions for use:**

- Fill the sprayer tank with clean water.
- Add the necessary dose of **ECO POTENT**.
- Stir to make a homogeneous mixture.
- Add chemicals.
- Stir again.
- Apply.

**Presentation:**

1 liter bottle.

**Dose:**

Soft water...20-30 cm<sup>3</sup> /100 L of water  
Medium-hard water 35-50 cm<sup>3</sup> /100 L of water  
Hard water 30-75 cm<sup>3</sup> /100 L of water

**Compatibility:**

***ECO POTENT*** It is compatible with all types of chemical products: herbicides, fungicides, insecticides, fertilizers, and growth regulators; provided that the indicated doses and instructions for use are observed.

When used as recommended, ***ECO POTENT*** does not have any adverse effects on the environment.
